Response to Arguments

1. Applicant's arguments filed 01/28/2003 have been fully considered but they are not persuasive.

Applicant argues, "...Summerfelt fails to teach pooling of a conductive metal or platinum layer...". According to the specification (page 5, lines 25 – 29), "...pools" or "pooling" refers to a phenomenon that is believed to be similar to non-wetting of a surface wherein the binding energy of the material deposited (e.g., platinum, ruthenium) is much greater to itself than to the surface which is deposited (e.g., silicon, BPSG, etc.) so that "islands of the deposited material form...". Having this in mind, Summerfelt (Fig.11a-b and column 8, lines 25 – 40, for example) teach depositing 30Å of platinum on a surface. Then, an annealing process is performed of the surface where the platinum is deposited. During this process, platinum nucleuses become smaller and eventually disappear while larger more stable nuclei grow at the expense of the smaller nuclei. Therefore, Summerfelt inherently teaches pooling of platinum on an exposed region of the substrate assembly.

Conclusion

2. Papers related to this application may be submitted directly to Art Unit 2823 by facsimile transmission. Papers should be faxed to Art Unit 2823 via the Art Unit 2823 Fax Center located in Crystal Plaza 4, room 3C23. The faxing of such papers must conform to the notice published in the Official Gazette, 1096 OG 30 (15 November
